

OIL MIST

CLEAN MIST PRO

Centrifugal oil mist filter

Designed, engineered, and patented, the **CLEANMIST PRO** range includes a series of centrifugal filters for oily mists, capable of offering high performance, high efficiency, and easy maintenance.

The contaminated air is drawn in through the inlet using the centrifugal motion of a centrifugal impeller, equipped with panels made of controlled-density bulpren. As the air passes through the panels, the particles undergo a coalescence effect and are subsequently drained outside through a dedicated discharge pipe.

Additionally, a subsequent filtration stage, which utilizes the physical principle of coalescence, combined with a fiberglass FFA filter medium, ensures an efficiency of 99.99%.

Accessories:

- ▶ Wide range of support frames to adapt to every installation requirement
- ▶ Installation kit
- ▶ Regulating dampers

Advantages:

- ▶ High performance
- ▶ Low noise
- ▶ Compact and innovative design
- ▶ Easy installation
- ▶ Reduced maintenance and easy operation
- ▶ Technical support and after-sales service
- ▶ Remote monitoring capability
- ▶ Easy-to-interpret visual LED indicator for optimal operating condition
